Purpose
The COVID Safe Workplace Guidelines set out what employers should do as they continue, or seek to resume, business operations. By following these guidelines you will be able to show how you will comply with minimum standards determined by Public Health, and with the requirements of the Work Health and Safety Act. This will help keep your workers and others safe from COVID-19. Workplaces that do not show compliance with the standards may be subject to enforcement actions.

About the public transport industry
The public transport industry refers only to public buses (general access and school bus services) and public ferry services, contracted by the Secretary of the Tasmanian Department of State Growth, or by the Tasmanian Transport Commission. It does not include private or tourist transport. The industry operates across a range of workplaces. Workplaces may include vehicles or vessels, depots, offices and workshops. There is limited capacity for employees in the public transport industry to work remotely. Public transport does not include commercial tours and charter services such as school excursions and other privately engaged services.

Public buses and public ferries are currently exempt from restrictions on gatherings. Meeting the demand for services while adhering to strict physical distancing measures is not always feasible. Passengers who are not from the same household should be encouraged to maximise physical distancing to the extent possible. It is the joint responsibility of operators and passengers to ensure the safe ongoing delivery of public transport.

How to comply with the new standards
Businesses must implement measures to achieve the minimum standards and must also document these measures. You will need to do a risk assessment to decide which control measures are most suited to your industry and business. You will need to take into account the level of risk of the virus spreading that exists at the time. On the following pages are examples of control measures that will help you meet each new standard.

Managing other risks
You must manage other risks associated with COVID-19. These include:

- the risks to health and safety of workers doing unfamiliar tasks. Consult with these workers about their skills, training needs and workloads before they start new work.
- the risks to mental health of workers due to the pandemic. Offer information and support, including counselling through an employee assistance program, a supportive workplace culture, or external service providers such as Lifeline or Beyond Blue.

Checklists and templates
A COVID-19 Safety Plan is a great way for businesses to document measures and show how they are keeping their customers, their workers and the community safe. These templates and checklist will help you develop a COVID-19 Safety Plan.

- COVID-19 Workplace Checklist: Use this checklist to keep your workers and others safe at the workplace and limit the spread of COVID-19. It covers working from home, physical distancing, handwashing/hygiene, cleaning and more. Update it on a regular basis.
- COVID-19 Safety Plan small business template
- COVID-19 Safety Plan medium business template: Use these templates to show how you are planning to manage any risks arising from restarting your small or medium business.

Other resources that may assist you in completing your COVID-19 Safety Plan include:

- Safe Work Australia public transport industry information for COVID-19
- COVIDSafe Planning tool (National COVID-19 Coordination Commission): online planning tool to help you keep your workers, customers and the community safe.
- Pandemic Plan Advice (WorkSafe Tasmania): includes planning, communication and consultation, risk management, and general control measures.
- How to clean and disinfect your workplace (Safe Work Australia): explains products to use and how to clean items specific to retail, such as cash registers and EFTPOS machines.
- Safe Work Australia COVID-19 Resource Kit: includes checklists for:
  - Cleaning
  - Physical distancing
  - Health, hygiene and facilities
  - Printable signage.
- Tasmanian Government Advice on gatherings

Check this site regularly, as the numbers permitted to attend gatherings will change as the three recovery stages are worked through.

When you undertake your business activities they must be consistent with the Public Health directives at that time.

<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
</table>
| 1. Managing risks to health and safety | An employer must manage the risk of a person contracting or spreading COVID-19 disease:  
   a. in the workplace; or  
   b. in connection with the conduct of the business or undertaking.  
   The employer must identify and manage the risks that may contribute to a person contracting or spreading COVID-19.  
   In managing the risks, the employer must take into account information that is published and accessible by the employer about:  
   • a duty or obligation imposed under the WHS Act, the Public Health Act or Emergency Management Act  
   • relevant information, recommendations or guidance materials published or specified by a public authority, an equivalent Commonwealth authority, or a relevant industry body, in relation to COVID-19  
   • the nature of the work being performed  
   • the nature of the industry in which the work is being performed  
   • the environmental conditions of the workplace, such as design, layout or systems of work, which may increase a person's exposure to COVID-19.  
   The above information needs to be considered when:  
   1. implementing the controls, and  
   2. reviewing and adjusting the controls:  
   In managing risks, you must seek to eliminate the risk first, as far as is reasonably practicable. If you can't eliminate it, you must minimise the risk as far as is reasonably practicable.  
   Apply the hierarchy of controls using the highest level of control that is reasonably practicable. You many need a combination of controls.  
   Eliminating the risk is the best option, followed by substitution, then isolation and engineering controls. If the above can't be achieved, then reduce the risk through administrative controls. Reducing the risk by using personal protective equipment (PPE) is the lowest level of control.  
   Maintain your control measures and review them regularly to ensure the highest level of effective control is being used.  
   Consult with workers and/or their health and safety representatives (HSRs) throughout this process  
   The first step is to undertake a risk assessment. This can help you:  
   ► identify which workers are at risk of exposure  
   ► determine what sources and processes are causing the risk  
   ► identify what kind of control measures should be put in place, and  
   ► check the effectiveness of existing control measures.  
   Complete and review your risk assessment regularly to ensure your control measures are still working; or if risk levels change.  
   Key things to consider:  
   ► What are the current legal requirements (e.g. public health orders, health directions) for my area and how do they apply to my business?  
   ► Does the nature of the work undertaken by my business increase the risk of my workers being exposed to COVID-19?  
   ► What effect could the COVID-19 controls I implement have on other hazard management controls already in place?  
   ► Does my workplace have facilities for hand washing and/or hand sanitising?  
   ► Does my workplace environment/layout increase the risk of my workers and/or clients being exposed to COVID-19 and can this be changed?  
   ► Do I have workers that fall within a vulnerable worker category?  
   ► What are my current cleaning and disinfecting arrangements?  
   ► How prepared is my business if there is a case of COVID-19 in the workplace?  
   ► Is there an increased risk of violence in my workplace?  
   ► What worker communication and support mechanisms are in place?  
   ► Do the changes I plan to make to my business or changes arising from COVID-19 change the risk?  
   ► Do I have a plan to review my control measures to ensure they are effective? |

| 2. Cleaning and hygiene    | **Cleaning**  
The employer must prepare, implement and maintain a schedule for cleaning, and where appropriate disinfecting, that ensures the workplace is routinely cleaned. This must include furniture, equipment and other items.  
The cleaning schedule should be in writing so that all workers are aware of the requirements. The schedule should take into account the level of risk of exposure to, contracting or spreading COVID-19 within the workplace.  
This schedule is to set out both the frequency and manner in which cleaning and disinfecting is to be done.  
**Hygiene**  
The employer is to put a hygiene procedure in place to ensure all persons at the workplace are observing appropriate hygiene measures to minimise the risk of exposure to, contracting or spreading COVID-19 within the workplace.  
This procedure is to address the cleaning of hands by workers and other persons in the workplace using soap and water or the use of hand sanitiser, as appropriate for the circumstances.  
**Supplies and Equipment**  
The employer must provide all the supplies and equipment necessary to ensure that the cleaning schedule and hygiene procedure implemented for the workplace is able to be complied with. | **Buses and Ferries:**  
**Cleaning**  
▶ Conduct cleaning according to the level of risk exposure. Services with higher volumes of passengers should be cleaned more frequently. Document this in your cleaning schedule.  
When cleaning, direct attention to surfaces and objects most often touched by drivers and passengers. These include:  
- steering wheels, door handles, controls or buttons, seatbelts, keys, hand-rails, grab handles, seat backs, armrests and windows  
- touch-payment or fare reader devices  
▶ Ensure the cleaning of less frequently used surfaces at least daily  
▶ Any surfaces that are visibly dirty, or have a spill, should be cleaned as soon as this is noticed, regardless of when they were last cleaned  
▶ Using detergent and water is appropriate for cleaning.  
▶ Ensure the cleaning of less frequently used surfaces at least daily  
▶ Any surfaces that are visibly dirty, or have a spill, should be cleaned as soon as this is noticed, regardless of when they were last cleaned  
▶ Using detergent and water is appropriate for cleaning.  
▶ Wash hands and put on gloves before commencing cleaning. Advice about putting on and removing gloves correctly is available here  
▶ Cleaning should start with the cleanest surface first, progressively moving towards the dirtiest surface  
▶ When surfaces are clean they should be as dry as possible, to prevent slips/falls and the spread of viruses and bacteria through droplets  
▶ Disinfecting means using chemicals to kill germs on surfaces. These can be in the form of liquids/sprays or wipes, and are labelled as “disinfectant” on their packaging  
▶ Disinfectants are usually only necessary if a surface is contaminated with potentially infectious material, or if your workplace has many customers or others entering each day  
▶ It is important to clean before disinfecting  
▶ Allow surfaces to dry naturally (do not dry with paper towels or cloths)  
▶ When surfaces are clean they should be as dry as possible, to prevent slips/ falls and the spread of viruses and bacteria through droplets  
▶ Dispose of used wipes and disposable gloves in a rubbish bin  
▶ Wash and dry your hands thoroughly, immediately after disposing of wipes and gloves  
▶ Consult with staff responsible for cleaning, or your cleaning contractor. Ensure they can maintain the increased cleaning schedule. Discuss any supplies or equipment needed  
▶ Maintain a record of cleaning undertaken. If practicable, consider displaying cleaning schedules on-board for sign-off when completed.  

**Hygiene**  
▶ Instruct drivers to clean or sanitise their hands often especially when handling cash or assisting passengers with luggage or mobility devices  
▶ Encourage drivers to avoid sharing equipment where possible  
▶ Use cashless payment where possible and encourage passengers to adopt cashless fare methods where available  
▶ Maximise airflow on-board using air-conditioning (with air sourced from outside the vehicle, not recirculated) and by opening windows where possible  
▶ Where reasonably practicable, use signage and posters at bus and ferry terminals, bus stops and inside buses and ferries, to communicate to passengers that they must not travel when sick and to practice good hygiene before, during and after using public transport |
Cleaning and hygiene (cont.)

Hygiene (cont.)
► Current Public Health advice is that the use of masks is not required in the current situation of no evidence of community transmission of COVID-19 in Tasmania.
► If a workplace risk assessment identifies that Personal Protective Equipment (such as face masks) is appropriate as an additional control measure, these should be used in accordance with manufacturers’ instructions, and staff must be trained in their correct use and disposal.
► Gloves, eye protection and face masks are not recommended for drivers, given other controls in place. Additional risks can arise with the use of masks.
► Unless specific risks have been identified, it is not necessary to install a Perspex or ‘sneeze’ screen between drivers and the public due to shorter interaction times. If a Perspex screen is installed, operators should refer to Safe Work Australia’s advice on managing additional WHS considerations such as cleaning and installation.
► Passengers may wish to carry their own hand sanitiser or cleaning wipes.

Other workplace premises, such as depots, offices, workshops and lunch rooms:

Cleaning
► For guidance on cleaning and disinfecting, see above.
► Frequently clean and disinfect other workplace vehicles including frequently touched surfaces such as the steering wheel, arm and head rests, mirrors, door handles, controls or buttons, seatbelt and keys.
► Regularly clean surfaces/items that are frequently touched/used including counters, handrails, doors, controls, chair backs and arms, light switches, phones and keyboards.
► Surfaces used less frequently should be cleaned daily.
► Talk to your cleaning provider to ensure the cleaning schedule can be maintained, and undertaken more frequently if required.
► Display cleaning schedules in the workplace, and make sure they are signed off as and when completed.

Hygiene
► You should direct your workers and others to practice good hygiene at your workplace, including avoiding touching their face, eyes, nose or mouth.
► Everyone should wash their hands with soap and water for at least 20 seconds and dry them with clean paper towel. Use alcohol-based hand sanitiser if unable to wash hands. This should occur:
  - before and after eating
  - after coughing or sneezing (into elbow/tissue)
  - after going to the toilet
  - before and after smoking cigarettes
  - when changing tasks
  - after touching potentially contaminated surfaces.
► Ensure signs on correct hand washing are available in toilets and staff break rooms.

Supplies and Equipment
► Ensure cleaning products are available. Instruct workers in their safe use and make sure Safety Data Sheets are available.
► Establish/document procedures for the safe disposal of contaminated waste.
► Select and use appropriate cleaning and disinfecting products. Refer to the guidance from Safe Work Australia and Public Health.
► Wear gloves and eye protection when handling and preparing disinfecting solutions.
### 3. Restrictions on entry to the workplace

The employer must take all reasonable steps to ensure that a worker does not enter or attend the workplace if the worker is required to isolate, or quarantine, under a direction by:

- the Director of Public health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006

A worker must not enter a workplace if the worker is required to isolate, or quarantine, under a direction made by:

- the Director of Public Health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006

However, a worker is able to be at a workplace for the following reasons:

1. to obtain medical treatment or testing in relation to COVID-19, and the workplace is the appropriate place to receive such treatment or testing, or
2. the worker is required or permitted, under a direction made in relation to COVID-19, to enter or be at the workplace, and does so in accordance with that direction, or
3. there is an emergency and the worker is entering or at the workplace to protect:
   - the safety of the worker, or
   - the safety of another person, or
   - the worker’s property or the property of another person.

<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display signage and posters inside buses and ferries to communicate to passengers that they must not travel when sick</td>
</tr>
<tr>
<td>Display signs at the front of your premises/workplace telling people not to enter if they have COVID-19 symptoms, cold/flu symptoms or have been in close contact with confirmed cases</td>
</tr>
<tr>
<td>Ask people to leave your premises/workplace if they display symptoms associated with COVID-19. This requirement does not apply to passengers on public transport vehicles and vessels</td>
</tr>
<tr>
<td>Update your induction procedures to ensure all contractors are aware of your COVID-19 controls</td>
</tr>
<tr>
<td>Ensure contractors/supplier/customers/visitors confirm they are well when ‘signing in’ to premises/workplaces. This requirement does not apply to passengers on public transport vehicles and vessels</td>
</tr>
<tr>
<td>Try to reduce contact with delivery drivers. Where practical, complete all paperwork electronically.</td>
</tr>
<tr>
<td>In relation to temperature testing, current advice from Work Safe Australia is that: ‘for many workplaces, there may be little benefit in conducting temperature checks on workers or others. This is because temperature checks will not tell you whether a person has COVID-19. It will only identify symptoms. It is possible that a person may be asymptomatic or be on medication that reduces their temperature. It is also possible that the person may have a temperature for another reason unrelated to COVID-19.’</td>
</tr>
<tr>
<td>If a workplace chooses to conduct temperature testing, it should seek the advice of the public health authority on the appropriate method of temperature checking, equipment, PPE and control measures required to ensure safe testing.</td>
</tr>
<tr>
<td>To assist with contact tracing:</td>
</tr>
<tr>
<td>The employer should implement a method to to ensure that employers know who is on site at any time</td>
</tr>
<tr>
<td>These records should be kept for at least 28 days</td>
</tr>
<tr>
<td>This requirement does not apply to passengers on public transport vehicles and vessels</td>
</tr>
</tbody>
</table>
4. Physical distancing at the workplace

An employer must take all reasonable steps to ensure that as far as is reasonably practicable that the current physical distancing requirements are complied with. The current requirements are detailed at coronavirus.tas.gov.au.

If it is not reasonably practicable to comply with the physical distancing requirements described above, then the employer should ensure that control measures are implemented in keeping with the requirements to manage the risks to health and safety relevant to COVID-19 as described in the “Managing Risks to Health and Safety” section of this document.

A person at, entering or leaving a workplace must ensure that s/he complies with physical distancing requirements of that workplace, if it is reasonable to do so.

Note: some premises may be exempt from the maximum density limits under the current Public Health Directions. Please refer to coronavirus.tas.gov.au for the latest advice and Directions.

On public transport vessels and vehicles:

- Strict physical distancing requirements, such as the 1.5 metre distance rule and the maximum density limit, do not apply to public transport
- However, passengers from different households should be encouraged to maximise physical distancing to the extent possible
- Passengers will need to take personal responsibility and apply common sense to support physical distancing measures
- Passengers should ensure that, to the greatest extent practicable, space is maintained between themselves and passengers from different household groups
- It is not routinely recommended that members of the public use face masks where community transition is low. A face mask is not a substitute for other measures and inappropriate use is associated with risk. However, some passengers may choose to wear a mask if they are at increased risk of severe illness if infected. More information about the use of masks by the public is available here
- Operators may impose operational requirements on passenger movements related to COVID-19, such as seating restrictions, particularly areas immediately around drivers, boarding instructions or one way passenger flow. However, these arrangements will need to account for passengers who require boarding assistance
- As per the regulations, no unaccompanied school child should be denied access to a school bus or general access bus service
- For ferry transport, vehicle drivers and vehicle passengers are requested to remain in their vehicles, unless needing to use amenities on board the ferries. Foot passengers have access to ferry passenger lounges, where physical distancing measures are in place
- Where reasonably practicable, physical distancing should be maintained at bus and ferry terminals, and at bus stops. Physical distancing at public bus stops is the responsibility of passengers and not the bus operator. Signage, floor and pavement markings may assist here. Distancing at public bus stops is not within the control of individual bus operators

In other workplace premises, such as depots, offices, workshops and meal rooms:

- Physical distancing requirements for bus depots, workshops, offices and meal facilities are the same as for other workplaces
- Work out the capacity of your premises so so you can apply the appropriate density and physical distancing requirements. This may include measuring the area of a room/space and calculating its capacity against the current physical distancing requirements. This will ensure you know the maximum capacity of your gathering spaces.
- Limit the number of people into your premises at any one time to meet these requirements
- Display signs at entrance of premises and inside advising of these requirements
- Use floor/wall markings to keep workers and others at least 1.5m apart from each other
- Where it is safe and practicable to do so, limit movement between aisles to one direction and confirm with floor marking arrows
- Know the capacity of gathering spaces before scheduling meetings
- Practice physical distancing at all meetings
### Title: Physical distancing at the workplace (cont.)

**Standard Actions to control the risks associated with COVID-19 may include, but not limited to:**

- Stagger break times to reduce the number of staff using break rooms at one time
- Vary operating hours to limit number of people
- Vary tasks to reduce the number of people required in indoor areas
- Hold meetings outside where appropriate (still following physical distancing)
- Separate tables/seating to ensure physical distancing
- Minimise the number of people within an area at any time by limiting access to the workplace or parts of the workplace to essential workers only
- Move work tasks to different areas or off-site if possible
- Explore the use of technology to complete certain tasks such as virtual inspections of equipment
- Use the hierarchy of controls to help identify appropriate controls when physical distancing cannot be achieved
- Information the safe use of fleet vehicles can be found on the coronavirus website
- Where safe and practicable to do so, workers may interact using other methods such as mobile phone or radio to communicate rather than face to face interaction, including for handovers.

### Title: Providing instruction, training and supervision in respect to COVID-19

The employer must provide each worker at the workplace (including contractors and volunteers) with information, training and instruction on:

- the risks in relation to COVID-19, and
- the control measures implemented in the workplace to mitigate those risks, in relation to COVID-19.

The employer must provide adequate supervision to ensure that the control measures are implemented in the workplace in relation to COVID-19.

The employer must also ensure that information and instruction is provided to other persons entering the workplace about the control measures in place to mitigate the risks of COVID-19 and the requirements of those persons to apply the control measures.

The information and instructions are to be in a format that is reasonable to the circumstances.

A worker or other person, at the workplace or entering or leaving the workplace, must comply, so far as the person is reasonably able, with any reasonable instruction that is given by the employer to allow the employer to manage the risks to health and safety within the workplace.

**Actions to control the risks associated with COVID-19 may include, but not limited to:**

- Ensure everyone is aware of their responsibility to protect themselves, other workers, and the public
- Provide workers with written advice on how to manage COVID-19 risks
- Display signs around workplaces advising of risk control requirements. For example, covering coughs, maximum number of people in a room, not to enter workplace if unwell. This requirement does not apply to public transport vehicles and vessels
- Provide workers with training in COVID-19 controls (conduct training using physical distancing)
- Brief workers on the symptoms of COVID-19. Tell workers to stay home if they aren’t feeling well; even if they consider their symptoms minor
- If workers need personal protective equipment (PPE), train workers to use it correctly
- Ensure workers know what to do if someone at the workplace becomes infected with COVID-19
- Give supervisors guidelines for ensuring COVID-19 controls are applied/enforced at all times
- Document/record COVID-19 procedures; provide training to workers in these
- Keep notes of issues raised and discuss at staff meetings
- Customers/clients at an employer’s premises must comply with any reasonable direction given to them about COVID-19 controls.

| 6. Responding to an incident of COVID-19 in the workplace | The employer at a workplace must ensure that an emergency plan is prepared for the workplace that provides for emergency procedures, testing of the procedures and the provision of information, training and instruction to relevant workers in implementing the emergency procedures. | An emergency plan is a document that sets out instructions for workers and others in the case of an emergency. A COVID-19 emergency response plan should detail:  
► How the workplace will respond in the event of contamination by a worker or customer  
► Who has responsibilities in this event. Immediately notify Public Health by phoning 1800 671 738 and follow their advice to:  
► Help the affected person receive medical treatment  
► Identify who has been in close contact with the ill person  
► Isolate the affected areas: keep staff, customers and passengers away. You may need to close the premises and/or take the affected vehicle/vessel out of service. Organise cleaning of the premises/vehicle/vessel as directed by Public Health. For cleaning:  
► Review the Safe Work Australia guidance on cleaning and disinfecting workplaces  
► Wear PPE: face mask, protective eyewear and gloves  
► Remove soiled or contaminated items and dispose of them in a safe way  
► Clean and disinfect all surfaces or items that may have been in contact with the ill person. In some cases, you must notify WorkSafe Tasmania. Check the WorkSafe Tasmania website for requirements. You may need to include in your plan:  
► Contact details for people who have specific roles or responsibilities under the emergency plan. For example, managers, security, cleaners, or first aid officers  
► Contact details for COVID-19 notification to Public Health  
► A description of the method to alert people to an emergency or possible emergency – this may be affected by remote working  
► Any changes to evacuation procedures or assembly points  
► The post-incident follow-up process, including who must be notified. (This may include the process for notifying the business if a worker experiences an emergency while working from home.)  
► If you share facilities, include a process for advising other businesses about a diagnosis of COVID-19  
► Procedures for testing the emergency plan, including the frequency of testing must be included  
► Arrange training to ensure all staff are aware of, and understand the plan. |
