COVID Safe Workplace Guidelines
HEALTH CARE INDUSTRY

Purpose
The COVID Safe Workplace Guidelines set out what employers should do as they continue, or seek to resume, business operations. By following these guidelines you will be able to show how you will comply with minimum standards determined by Public Health, and with the requirements of the Work Health and Safety Act. This will help keep your workers and others safe from COVID-19. Workplaces that do not show compliance with the standards may be subject to enforcement actions.

About the health care industry
The health care industry provides services, care and support to people of all ages. Workplaces include public and private acute facilities, primary and community services, allied health professional services, and ambulance and transport services. Services may be provided at home or via telehealth.

In the health care industry, providers must implement controls to eliminate or minimise the spread of COVID-19 and ensure the health and safety of their patients, clients, workers, and others at the workplace.

Education and training of health care workers is often undertaken in workplaces. This guideline also includes health care worker students and trainees in the workplace.

Some providers may also operate retail shopfronts. In these instances, the Retail Industry Guidelines should be referred to in place of, or alongside, these guidelines as appropriate.

How to comply with the new standards
Businesses must implement measures to achieve the minimum standards and must also document these measures. You will need to do a risk assessment to decide which control measures are most suited to your industry and business. You will need to take into account the level of risk of the virus spreading that exists at the time. On the following pages are examples of control measures that will help you meet each new standard.

► Template and example COVID-19 risk register (Safe Work Australia): a template for doing a risk assessment.

Managing other risks
You must manage other risks associated with COVID-19. These include:

► the risks to health and safety of workers doing unfamiliar tasks. Consult with these workers about their skills, training needs and workloads before they start new work.

► the risks to mental health of workers due to the pandemic. Offer information and support, including counselling through an employee assistance program, a supportive workplace culture, or external service providers such as Lifeline or Beyond Blue.

Checklists and templates
A COVID-19 Safety Plan is a great way for businesses to document measures and show how they are keeping their customers, their workers and the community safe. These templates and checklist will help you develop a COVID-19 Safety Plan.

► COVID-19 Workplace Checklist: Use this checklist to keep your workers and others safe at the workplace and limit the spread of COVID-19. It covers working from home, physical distancing, handwashing/hygiene, cleaning and more. Update it on a regular basis.

► COVID-19 Safety Plan small business template

► COVID-19 Safety Plan medium business template: Use these templates to show how you are planning to manage any risks arising from restarting your small or medium business.

Other resources that may assist you in completing your COVID-19 Safety Plan include:

► Safe Work Australia health care industry information for COVID-19

► COVIDSafe Planning tool (National COVID-19 Coordination Commission): online planning tool to help you keep your workers, customers and the community safe.

► Pandemic Plan Advice (WorkSafe Tasmania): includes planning, communication and consultation, risk management, and general control measures.

► How to clean and disinfect your workplace (Safe Work Australia): explains products to use and how to clean items.

► Safe Work Australia COVID-19 Resource Kit: includes checklists for:
  - Cleaning
  - Physical distancing
  - Health, hygiene and facilities
  - Printable signage.

► COVID-19 (Tasmanian Government): Provides up to date information on the Tasmanian situation and response to COVID-19

► COVID-19 Resources (Australian Government): Provides COVID-19 resources supplied by the Australian Government
COVID Safe Workplace Guidelines

► COVID-19 Series of National Guidelines (Communicable Diseases Network Australia): The current version of the National Guidelines relating to COVID-19

► Australian Guidelines for the Prevention and Control of Infection in Healthcare 2019 (National Health and Medical Research Council): Nationally endorsed guidelines on infection prevention and control

► Preplacement Risk Assessment (University of Tasmania): to establish the risk prior to undertaking student or trainee placements. Other institutions may have similar tools

► Tasmanian Government Advice on gatherings
  Check this site regularly, as the numbers permitted to attend gatherings will change as the three recovery stages are worked through.

  When you undertake your business activities they must be consistent with the Public Health directives at that time.

</tr>
<tr>
<td></td>
<td>1. implementing the controls, and</td>
</tr>
<tr>
<td></td>
<td>2. reviewing and adjusting the controls:</td>
</tr>
</tbody>
</table>

### Actions to control the risks associated with COVID-19 may include, but not limited to:

In managing risks, you must seek to eliminate the risk first, as far as is reasonably practicable. If you can’t eliminate it, you must minimise the risk as far as is reasonably practicable.

Apply the hierarchy of controls using the highest level of control that is reasonably practicable. You may need a combination of controls.

Eliminating the risk is the best option, followed by substitution, then isolation and engineering controls. If the above can’t be achieved, then reduce the risk through administrative controls. Reducing the risk by using personal protective equipment (PPE) is the lowest level of control.

Maintain your control measures and review them regularly to ensure the highest level of effective control is being used.

Consult with workers and/or their health and safety representatives (HSRs) throughout this process

The first step is to undertake a risk assessment. This can help you:

- identify which workers are vulnerable or at risk of exposure
- determine what sources and processes are causing the risk
- identify what kind of control measures should be put in place, and
- check the effectiveness of existing control measures.

Complete and review your risk assessment regularly to ensure your control measures are still working; or if risk levels change.

Key things to consider:

- What are the current legal requirements (e.g. public health orders, health directions) for my area and how do they apply to my business?
- Does the nature of the work undertaken by my business increase the risk of my workers being exposed to COVID-19?
- What effect could the COVID-19 controls you implement have on other hazard management controls you already have in place?
- Does my workplace have facilities for hand washing and/or hand sanitising?
- Does my workplace environment/layout increase the risk of my workers and/or clients being exposed to COVID-19 and can this be changed?
- Do I have workers that fall within a vulnerable worker category?
- What are my current cleaning and disinfecting arrangements?
- How prepared is my business if there is a case of COVID-19 in the workplace?
- Is there an increased risk of violence in my workplace?
- What worker communication and support mechanisms are in place?
- Do the changes I plan to make to my business or changes arising from COVID-19 change the risk?
- Do I have a plan to review my control measures to ensure they are effective?

<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>2. Cleaning and hygiene</strong></td>
<td><strong>Cleaning</strong> The employer must prepare, implement and maintain a schedule for cleaning, and where appropriate disinfecting, that ensures the workplace is routinely cleaned. This must include furniture, equipment and other items The cleaning schedule should be in writing so that all workers are aware of the requirements. The schedule should take into account the level of risk of exposure to, contracting or spreading COVID-19 within the workplace. This schedule is to set out both the frequency and manner in which cleaning and disinfecting is to be done.</td>
<td>► You should arrange for extra cleaning of frequently used surfaces. Document this in your cleaning schedule. Frequently used or touched surfaces or items, include (but not limited to): - handrails, doors, door handles, bedrails, tabletops cupboards, cupboard handles and light switches - IT equipment, including keyboards and phones - amenities, including toilets and taps <strong>Vehicles</strong> - Interior and exterior surfaces which may be touched, must be regularly and thoroughly cleaned e.g. at the start and end of a shift and when changing drivers. This includes door handles, arm and head rests, mirrors, the steering wheel, gear lever, touch screens, other control panels/knobs and the inside of the doors. - Personal items including vehicle keys, mobile phone, fuel card and work pass card should also be regularly cleaned. ► Ensure the cleaning of less frequently used surfaces at least daily ► Terminal cleaning (sometimes also referred to as an ‘infectious clean’) should be undertaken following discharge or transfer of a patient with an infectious/communicable disease ► Any surfaces that are visibly dirty, or have a spill, should be cleaned as soon as this is noticed, regardless of when they were last cleaned ► Using detergent and water is appropriate for cleaning. ► Cleaning should start with the cleanest surface first, progressively moving towards the dirtiest surface ► When surfaces are clean they should be as dry as possible, to prevent slips/falls and the spread of viruses and bacteria through droplets ► Disinfecting means using chemicals to kill germs on surfaces. These can be in the form of liquids/sprays or wipes, and are labelled as “disinfectant” on their packaging ► Disinfectants are usually only necessary if a surface is contaminated with potentially infectious material, or if your workplace has many customers or others entering each day ► It is important to clean before disinfecting ► Consult with staff responsible for cleaning, or your cleaning contractor, Ensure they can maintain the increased cleaning schedule. Discuss any supplies or equipment needed ► Display your cleaning schedule in the workplace. Ensure staff sign them off each time they clean the area/items. <strong>Hygiene</strong> ► You should direct your workers and clients/visitors to practice good hygiene at your workplace, including avoiding touching their face, eyes, nose or mouth ► Everyone should wash their hands with soap and water for at least 20 seconds and dry them with clean paper towel. Use alcohol-based hand sanitiser if unable to wash hands. This should occur: - before and after eating - after coughing or sneezing (into elbow/tissue) - after going to the toilet - before and after smoking cigarettes - when changing tasks - after touching potentially contaminated surfaces ► Ensure sure liquid soap is available in toilets and staff break rooms with instructional signs on correct hand washing</td>
</tr>
<tr>
<td><strong>Supplies and Equipment</strong> The employer must provide all the supplies and equipment necessary to ensure that the cleaning schedule and hygiene procedure implemented for the workplace is able to be complied with.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Title

**Cleaning and hygiene (cont.)**

### Standard

**Cleaning and hygiene (cont.)**

**Supplies and Equipment**
- Ensure cleaning products are available. Instruct workers in their safe use and make sure Safety Data Sheets are available.
- Establish/document procedures for the safe disposal of contaminated waste.
- Select and use appropriate cleaning and disinfecting products. Refer to the guidance from Safe Work Australia and Public Health.
- Wear gloves and eye protection when handling and preparing disinfecting solutions.

### Actions to control the risks associated with COVID-19 may include, but not limited to:

#### 3. Restrictions on entry to the workplace

The employer must take all reasonable steps to ensure that a worker does not enter or attend the workplace if the worker is required to isolate, or quarantine, under a direction by:
- the Director of Public health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006.

A worker must not enter a workplace if the worker is required to isolate, or quarantine, under a direction made by:
- the Director of Public Health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006.

However, a worker is able to be at a workplace for the following reasons:
1. to obtain medical treatment or testing in relation to COVID-19, and the workplace is the appropriate place to receive such treatment or testing, or
2. the worker is required or permitted, under a direction made in relation to COVID-19, to enter or be at the workplace, and does so in accordance with that direction, or
3. there is an emergency and the worker is entering or at the workplace to protect:
   - the safety of the worker, or
   - the safety of another person, or
   - the worker’s property or the property of another person.

- Display signs at the front of your premises/site telling people not to enter if they have COVID-19 symptoms, cold/flu symptoms or have been in close contact with confirmed cases.
- Ask people to leave your premises/site if they display symptoms associated with COVID-19.
- Ensure workers/contractors/suppliers/clients/visitors confirm they are well when ‘signing in’.
- Consider the use of workplace screening tools to assess persons on entry to the premises.
- Where customers or visitors are unwell but still require care, consideration should be given to how this could be provided in a safe way, including through phone consultation or the delivery of products.
- Update your induction procedures to ensure all contractors are aware of your COVID-19 controls.
- Try to reduce contact with delivery drivers. Where practical, complete all paperwork electronically.

To assist with contact tracing:
- The employer should implement a method to enable workers, contractors and volunteers to sign in and out for each shift they attend at the workplace.
- The employer should implement methods to track patient and visitor attendance at the workplace/premises.
- These records must be kept for at least 28 days, and be provided as soon as possible if requested by the Director of Public Health.
- In the case of smaller employers, particularly those providing personal services to people, maintaining a record of appointments will help trace attendees at a workplace if there is a COVID-19 exposure in the workplace.
- Encourage all workers to download and use the COVIDSafe app and allow workers to carry their mobile phone when in the workplace if appropriate. Consideration should be given to how mobiles can be regularly cleaned.

<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>4. Physical distancing at the workplace</td>
<td>An employer must take all reasonable steps to ensure that as far as is reasonably practicable that the current physical distancing requirements are complied with. The current requirements are detailed at coronavirus.tas.gov.au. If it is not reasonably practicable to comply with the physical distancing requirements described above, then the employer should ensure that control measures are implemented in keeping with the requirements to manage the risks to health and safety relevant to COVID-19 as described in the “Managing Risks to Health and Safety” section of this document. A person at, entering or leaving a workplace must ensure that s/he complies with physical distancing requirements of that workplace, if it is reasonable to do so. Note: some premises may be exempt from the maximum density limits under the current Public Health Directions. Please refer to coronavirus.tas.gov.au for the latest advice and Directions.</td>
<td>▶ Work out the capacity of your premises so you can apply the appropriate density and physical distancing requirements. This may include measuring the area of a room/space and calculating its capacity against the current physical distancing requirements. This will ensure you know the maximum capacity of your gathering spaces. ▶ Limit the number of people into your premises at any one time to meet these requirements ▶ Ensure physical distancing: where possible, put down floor markings to keep workers, patients and visitors at least 1.5m apart from each other ▶ Where appropriate, limit movement in spaces such as hallways to one direction and confirm with floor marking arrows ▶ Limit the number of people (such as visitors) into the workplace/premises at any one time to meet these requirements. Display signs at entrance of premises and inside advising of these requirements ▶ Stagger break times to reduce the number of staff using break rooms at one time ▶ Separate tables/seating to ensure physical distancing ▶ Vary visiting hours to limit number of people in the workplace/premises ▶ Vary tasks or scheduling to reduce the number of people required in individual areas ▶ Use technology to facilitate compliance with physical distancing guidelines including for patient care, health care worker education and training and meetings ▶ Schedule appointments where workers, visitors or others are required to use PPE in blocks where possible ▶ Where you can't achieve this physical distancing, identify appropriate alternative controls. These may include: - minimising the number of people within any area at any one time - limiting access to the workplace or parts of the workplace to essential workers only - staggering start, finish and break times - moving different tasks to different areas of the workplace, or off-site if possible - varying tasks to reduce the number of people required in indoor areas - separating workers into dedicated teams, working the same shifts, or working in a particular work area - ensuring each worker has their own tools and equipment - personal protective equipment (PPE) may also be appropriate in some circumstances ▶ Know the capacity of gathering spaces before scheduling meetings or other gatherings ▶ Practice physical distancing at all meetings or other gatherings ▶ Hold meetings outside where appropriate (still observing physical distancing measures), or use technology to hold meetings, e.g., teleconferencing or videoconferencing.</td>

<th>Title</th>
<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
</table>
| 5. Providing instruction, training and supervision in respect to COVID-19 | The employer must provide each worker at the workplace (including contractors and volunteers) with information, training and instruction on:  
- the risks in relation to COVID-19, and  
- the control measures implemented in the workplace to mitigate those risks, in relation to COVID-19.  
The employer must provide adequate supervision to ensure that the control measures are implemented in the workplace in relation to COVID-19.  
The employer must also ensure that information and instruction is provided to other persons entering the workplace about the control measures in place to mitigate the risks of COVID-19 and the requirements of those persons to apply the control measures.  
The information and instructions are to be in a format that is reasonable to the circumstances.  
A worker or other person, at the workplace or entering or leaving the workplace, must comply, so far as the person is reasonably able, with any reasonable instruction that is given by the employer to allow the employer to manage the risks to health and safety within the workplace. | ▶ Ensure everyone is aware of their responsibility to protect themselves, other workers, patients and the public  
▶ Provide workers with written advice on how to manage COVID-19 risks  
▶ Display signs around the workplace/premises advising of risk control requirements. For example, covering coughs, maximum number of people in a room, not to enter workplace if unwell  
▶ Provide workers with training in COVID-19 controls (conduct training using physical distancing)  
▶ Brief workers on the symptoms of COVID-19. Tell workers to stay home if they aren’t feeling well; even if they consider their symptoms minor  
▶ Where personal protective equipment (PPE) is required, provide workers with instructions on its correct and appropriate use  
▶ Have PPE champions or “spotters” to ensure PPE is donned, doffed and used correctly  
▶ Ensure workers know what to do if someone at the workplace becomes infected with COVID-19  
▶ Give supervisors guidelines for ensuring COVID-19 controls are applied/enforced at all times  
▶ Document/record COVID-19 procedures; provide training to workers in these  
▶ Keep notes of issues raised and discuss at staff meetings  
▶ Explore change management, mental health and wellbeing strategies to assist staff to adapt to new requirements  
▶ Visitors at an employer’s premises must comply with any reasonable direction given to them about COVID-19 controls  
▶ Employers must advise visitors of these requirements using signs at the entrances of their premises, and if available, through regular voice-over messages in the premises. |

6. **Responding to an incident of COVID-19 in the workplace**

<table>
<thead>
<tr>
<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
</table>
| The employer at a workplace must ensure that an emergency plan is prepared for the workplace that provides for emergency procedures, testing of the procedures and the provision of information, training and instruction to relevant workers in implementing the emergency procedures. | An emergency plan is a document that sets out instructions for workers and others in the case of an emergency. An COVID-19 emergency response plan should detail:  
  ▶ How the business will respond in the event of contamination by a worker or customer  
  ▶ Who has responsibilities in this event.  
Immediately notify Public Health by phoning 1800 671 738 and follow their advice to:  
  ▶ Help the affected person receive medical treatment  
  ▶ Identify who has been in close contact with the ill person  
  ▶ Isolate the affected areas: keep staff and customers away. You may need to close the business until advised it is safe to reopen.  
Residential health services (eg. 24-hour hospitals) and Ambulance Tasmania patient transport services:  
  ▶ Prepare a COVID-19 Outbreak Management Plan to help your organisation identify, respond to and manage a COVID-19 case or outbreak appropriately as part of a coordinated response led by Public Health Services. This is important to protect the health of employees and residents and prevent the spread of illness. Go to [health.tas.gov.au/outbreakmanagement](http://health.tas.gov.au/outbreakmanagement) for more information on the key steps involved and resources to support your planning and preparedness.  
Organise cleaning of the area as directed by Public Health or by local Infection Prevention and Control authorities. For cleaning:  
  ▶ Make sure all items are removed and discarded where appropriate.  
  ▶ Wear PPE as required by local protocols, or the Series of National Guidelines transition guide.  
  ▶ Clean and disinfect all surfaces or items that may have been in contact with the ill person  
In some cases, you must notify WorkSafe Tasmania. Check the WorkSafe Tasmania website for requirements.  
Explore mental health and wellbeing strategies and procedures to support staff welfare. You may need to include in your plan:  
  ▶ Contact details for people who have specific roles or responsibilities under the emergency plan. For example, managers, security, cleaners, or first aid officers  
  ▶ Contact details for COVID-19 notification to Public Health  
  ▶ A description of the method to alert people to an emergency or possible emergency – this may be affected by remote working  
  ▶ Any changes to evacuation procedures or assembly points  
  ▶ The post-incident follow-up process, including who must be notified. (This may include the process for notifying the business if a worker experiences an emergency while working from home.)  
  ▶ If you share facilities, include a process for advising other businesses about a diagnosis of COVID-19  
  ▶ Procedures for testing the emergency plan, including the frequency of testing must be included  
  ▶ Arrange training to ensure all staff are aware of, and understand the plan. |
