

Boiler Advanced – BA

The scope of work for advanced boiler operation includes the operation of a boiler, including a standard boiler, which may have one or more of the following:

- multiple fuel sources
- pre-heater
- superheater
- economiser

It is a prerequisite that applicants for an advanced boiler licence already hold or have previously passed assessment for a lower level boiler operation licence.

If a person held a HRW licence prior to 1 January 2013 in the class(es) of Basic Boiler or Intermediate Boiler that person is taken to hold a new HRW licence in Standard Boiler.

Transitional arrangements from 1 January 2013 will allow a current Intermediate Boiler HRW licence holder to continue to operate boilers for which they are currently authorised until 31 December 2013. If they operate a boiler with a multiple fuel source, a pre heater, a superheater or an economiser they will need to upgrade to an Advanced Boiler licence in order to continue operating after 31 December 2013.
