COVID Safe Workplace Guidelines

FIRE PROTECTION INDUSTRY

Purpose
The COVID Safe Workplace Guidelines set out what employers should do as they continue, or seek to resume, business operations. By following these guidelines you will be able to show how you will comply with minimum standards determined by Public Health, and with the requirements of the Work Health and Safety Act. This will help keep your workers and others safe from COVID-19. Workplaces that do not show compliance with the standards may be subject to enforcement actions.

About the fire protection industry
The fire protection industry in Tasmania performs a vital fire safety role in the built environment in ensuring occupant and firefighter safety. The industry is made up of fire systems contractors and portable fire equipment contractors. The industry provides support and advice to building owners/occupiers and a range of developers, Engineers and designers in complying with the legislative requirements in the built environment from a fire safety perspective.

This industry designs, assesses, installs, maintains, completes routine service and repairs of fire protection systems. This includes:
- Fire detection systems
- Fire suppression systems
- Air handling and smoke management systems
- Building occupant warning, control and intercom systems
- Passive fire protection systems
- Special hazard systems
- Portable fire equipment

Government ownership is not a criterion for classification to this industry division.

How to comply with the new standards
Businesses must implement measures to achieve the minimum standards and must also document these measures.

You will need to do a risk assessment to decide which control measures are most suited to your industry and business. You will need to take into account the level of risk of the virus spreading that exists at the time. On the following pages are examples of control measures that will help you meet each new standard.

► Template and example COVID-19 risk register (Safe Work Australia): a template for doing a risk assessment.

Managing other risks
You must manage other risks associated with COVID-19. These include:
- the risks to health and safety of workers doing unfamiliar tasks. Consult with these workers about their skills, training needs and workloads before they start new work
- the risks to mental health of workers due to the pandemic. Offer information and support, including counselling through an employee assistance program, a supportive workplace culture, or external service providers such as Lifeline or Beyond Blue.

Checklists and templates
A COVID-19 Safety Plan is a great way for businesses to document measures and show how they are keeping their customers, their workers and the community safe. These templates and checklist will help you develop a COVID-19 Safety Plan.

► COVID-19 Workplace Checklist: Use this checklist to keep your workers and others safe at the workplace and limit the spread of COVID-19. It covers working from home, physical distancing, handwashing/hygiene, cleaning and more. Update it on a regular basis.

► COVID-19 Safety Plan small business template

► COVID-19 Safety Plan medium business template: Use these templates to show how you are planning to manage any risks arising from restarting your small or medium business.

Other resources that may assist you in completing your COVID-19 Safety Plan include:

► Safe Work Australia building and construction industry information for COVID-19

► COVIDSafe Planning tool (National COVID-19 Coordination Commission): online planning tool to help you keep your workers, customers and the community safe.

► Pandemic Plan Advice (WorkSafe Tasmania): includes planning, communication and consultation, risk management, and general control measures.

► How to clean and disinfect your workplace (Safe Work Australia): explains products to use and how to clean items.
COVID Safe Workplace Guidelines FIRE PROTECTION INDUSTRY

► Safe Work Australia COVID-19 Resource Kit: includes checklists for:
  - Cleaning
  - Physical distancing
  - Health, hygiene and facilities
  - Printable signage.

► Additional fire industry specific COVID-19 information can be found at Fire Protection Association Australia and the National Fire Industry Association web sites with a range of guidelines for continuing operations through COVID-19 as well as guides to help members understand and access the range of business support packages that are available.

► Tasmanian Government Advice on gatherings
  Check this site regularly, as the numbers permitted to attend gatherings will change as the three recovery stages are worked through.
  When you undertake your business activities they must be consistent with the Public Health directives at that time.

► Where Fire Protection Contractors are required to enter Aged Care Facilities these guidelines must be adhered to.
Title | Standard | Actions to control the risks associated with COVID-19 may include, but not limited to:
--- | --- | ---
1. Managing risks to health and safety | An employer must manage the risk of a person contracting or spreading COVID-19 disease: a. in the workplace; or b. in connection with the conduct of the business or undertaking. The employer must identify and manage the risks that may contribute to a person contracting or spreading COVID-19. In managing the risks, the employer must take into account information that is published and accessible by the employer about: • a duty or obligation imposed under the WHS Act, the Public Health Act or Emergency Management Act • relevant information, recommendations or guidance materials published or specified by a public authority, an equivalent Commonwealth authority, or a relevant industry body, in relation to COVID-19 • the nature of the work being performed • the nature of the industry in which the work is being performed • the environmental conditions of the workplace, such as design, layout or systems of work, which may increase a person’s exposure to COVID-19. The above information needs to be considered when: 1. implementing the controls, and 2. reviewing and adjusting the controls: | In managing risks, you must seek to eliminate the risk first, as far as is reasonably practicable. If you can’t eliminate it, you must minimise the risk as far as is reasonably practicable. Apply the hierarchy of controls using the highest level of control that is reasonably practicable. You many need a combination of controls. Eliminating the risk is the best option, followed by substitution, then isolation and engineering controls. If the above can’t be achieved, then reduce the risk through administrative controls. Reducing the risk by using personal protective equipment (PPE) is the lowest level of control. Maintain your control measures and review them regularly to ensure the highest level of effective control is being used. Consult with workers and/or their health and safety representatives (HSRs) throughout this process. The first step is to undertake a risk assessment. This can help you: • identify which workers are at risk of exposure • determine what sources and processes are causing the risk • identify what kind of control measures should be put in place, and • check the effectiveness of existing control measures. Other issues you should consider as part of the risk assessment process could include: • Screening workers coming to site • Personal Protective Equipment • Workplace Mapping • Common Areas • Physical Distancing • Inspections • Hygiene • Travel • Shared Tools, Plant and Equipment • General Communications • Cleaning and Disinfecting • Vulnerable workers • Personnel Hoists. Complete and review your risk assessment regularly to ensure your control measures are still working; or if risk levels change. Key things to consider: • What are the current legal requirements (e.g. public health orders, health directions) for my area and how do they apply to my business? • Does the nature of the work undertaken by my business increase the risk of my workers being exposed to COVID-19? • What effect could the COVID-19 controls I implement have on other hazard management controls already in place? • Does my workplace have facilities for hand washing and/or hand sanitising? • Does my workplace environment/layout increase the risk of my workers and/or clients being exposed to COVID-19 and can this be changed? • Do I have workers that fall within a vulnerable worker category? • What are my current cleaning and disinfecting arrangements? • How prepared is my business if there is a case of COVID-19 in the workplace? • Is there an increased risk of violence in my workplace? • What worker communication and support mechanisms are in place? • Do the changes I plan to make to my business or changes arising from COVID-19 change the risk? • Do I have a plan to review my control measures to ensure they are effective?

<th>Title</th>
<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Cleaning and hygiene</td>
<td>Cleaning</td>
<td>► You should arrange for extra cleaning of frequently used surfaces. Document this in your cleaning schedule.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Frequently used or touched surfaces or items, include:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- table tops, counters, desks and furniture, handrails, doors, door handles, cupboards, cupboard handles and light switches</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- tills, phones, keyboards and EFTPOS facilities</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- amenities, including toilets, taps and sinks</td>
</tr>
<tr>
<td></td>
<td>Hygiene</td>
<td>Vehicles</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Interior and exterior surfaces which may be touched, must be regularly and thoroughly cleaned e.g. at the start and end of a shift and when changing drivers. This includes door handles, arm and head rests, mirrors, the steering wheel, gear lever, touch screens, other control panels/knobs and the inside of the doors.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Personal items including vehicle keys, mobile phone, fuel card and work pass card should also be regularly cleaned.</td>
</tr>
<tr>
<td></td>
<td>Supplies and Equipment</td>
<td>► Commonly touched surfaces (e.g. steering wheels) in shared work vehicles should be cleaned and disinfected the beginning and end of each use</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Ensure the cleaning of less frequently used surfaces at least daily</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Any surfaces that are visibly dirty, or have a spill, should be cleaned as soon as this is noticed, regardless of when they were last cleaned</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Using detergent and water is appropriate for cleaning.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Cleaning should start with the cleanest surface first, progressively moving towards the dirtiest surface</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► When surfaces are clean they should be as dry as possible, to prevent slips/falls and the spread of viruses and bacteria through droplets</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Disinfecting means using chemicals to kill germs on surfaces. These can be in the form of liquids/sprays or wipes, and are labelled as “disinfectant” on their packaging</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Disinfectants are usually only necessary if a surface is contaminated with potentially infectious material, or if your workplace has many customers or others entering each day</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► It is important to clean before disinfecting</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Consult with staff responsible for cleaning, or your cleaning contractor. Ensure they can maintain the increased cleaning schedule. Discuss any supplies or equipment needed</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Display your cleaning schedule in the workplace. Ensure staff sign them off each time they clean the area/items</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Workers should avoid the shared use of tools, plant and equipment wherever possible. For example, drop saws, drills, grinders, ladders or elevating work platforms should not be used by more than one worker</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Ensure tools and equipment are cleaned and disinfected after use</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Wear gloves when touching fire protection systems and equipment interfaces and surfaces</td>
</tr>
<tr>
<td></td>
<td></td>
<td>► Construction sites are diverse and vary in complexity, therefore employers and employees alike should apply a risk-based approach and implement reasonably practical controls based on the environment and specific hazards for each site.</td>
</tr>
</tbody>
</table>
### Cleaning and hygiene (cont.)

**Title**

**Standard**

**Actions to control the risks associated with COVID-19 may include, but not limited to:**

**Hygiene**

- You should direct your workers and customers/visitors to practice good hygiene at your workplace, including avoiding touching their face, eyes, nose or mouth.
- Everyone should wash their hands with soap and water for at least 20 seconds and dry them with clean paper towel. Use alcohol-based hand sanitiser if unable to wash hands. This should occur:
  - before and after eating
  - after coughing or sneezing (into elbow/tissue)
  - after going to the toilet
  - before and after smoking cigarettes
  - when changing tasks
  - after touching potentially contaminated surfaces
- Ensure signs on correct hand washing are available in toilets and staff break rooms.

**Supplies and Equipment**

- Ensure cleaning products are available. Instruct workers in their safe use and make sure Safety Data Sheets are available.
- Establish/document procedures for the safe disposal of contaminated waste.
- Select and use appropriate cleaning and disinfecting products. Refer to the guidance from Safe Work Australia and Public Health.
- Wear gloves and eye protection when handling and preparing disinfecting solutions.

### 3. Restrictions on entry to the workplace

The employer must take all reasonable steps to ensure that a worker does not enter or attend the workplace if the worker is required to isolate, or quarantine, under a direction by:

- the Director of Public Health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006.

A worker must not enter a workplace if the worker is required to isolate, or quarantine, under a direction made by:

- the Director of Public Health, under the Public Health Act 1997, or
- the State Controller under the Emergency Management Act 2006.

However, a worker is able to be at a workplace for the following reasons:

1. to obtain medical treatment or testing in relation to COVID-19, and the workplace is the appropriate place to receive such treatment or testing, or
2. the worker is required or permitted, under a direction made in relation to COVID-19, to enter or be at the workplace, and does so in accordance with that direction, or
3. there is an emergency and the worker is entering or at the workplace to protect:
   - the safety of the worker, or
   - the safety of another person, or
   - the worker’s property or the property of another person.

- Display signs at the front of your premises/workplace telling people not to enter if they have COVID-19 symptoms, cold/flu symptoms or have been in close contact with confirmed cases.
- Ask people to leave your premises if they display symptoms associated with COVID-19.
- Ensure contractors/suppliers/customers/visitors confirm they are well when ‘signing in’.
- Ask people have they recently been overseas and if so have they completed the full quarantine period.
- Change the way you greet people and do not use handshakes or any other physical personal greeting.
- Talk to suppliers and delivery services about how to safely manage deliveries of materials and equipment to the workplace including contactless document completion.
- If you have critical fire industry operations, think how you might bring a new worker in to your work environment and train them, if an operator becomes ill.
- Ensure any special requirements around Aged Care facilities and/or Health Facilities are considered and the minimum requirements put in place to protect residents/patients and workers.

To assist with contact tracing:

- The employer should implement a method to enable workers, contractors and volunteers to sign in and out for each shift they attend at the workplace.
- The employer should, where practicable, implement a method (if one does not already exist) to record interactions with members of the public.
- Government-employers should encourage employees to download the COVIDSafe App.
- Fire protection contractors should maintain an appointment book to help trace customers/clients if there is a COVID-19 exposure in the workplace or a client’s premises. These records should be kept for at least 28 days and be provided as soon as possible if requested by the Director of Public Health.
Title: Physical distancing at the workplace

Standard:

An employer must take all reasonable steps to ensure that as far as is reasonably practicable that the current physical distancing requirements are complied with. The current requirements are detailed at coronavirus.tas.gov.au.

If it is not reasonably practicable to comply with the physical distancing requirements described above, then the employer should ensure that control measures are implemented in keeping with the requirements to manage the risks to health and safety relevant to COVID-19 as described in the “Managing Risks to Health and Safety” section of this document.

A person at, entering or leaving a workplace must ensure that s/he complies with physical distancing requirements of that workplace, if it is reasonable to do so.

Note: some premises may be exempt from the maximum density limits under the current Public Health Directions. Please refer to coronavirus.tas.gov.au for the latest advice and Directions.

Actions to control the risks associated with COVID-19 may include, but not limited to:

- Work out the capacity of your premises so you can apply the appropriate density and physical distancing requirements. This may include measuring the area of a room/space and calculating its capacity against the current physical distancing requirements.
- This will ensure you know the maximum capacity of your gathering/ dining spaces.
- Limit the number of people into your premises at any one time to meet these requirements.
- Display signs at entrance of premises/venue and inside advising of these requirements.
- Use floor markings to keep workers and customers at least 1.5m apart from each other.
- You should consider and make adjustments to the layout of the workplace or your workflows to enable workers to keep at least 1.5 metres apart.
- If changing the physical layout of your premises, you should ensure that workers and others are able to safely enter, exit and move about the workplace under normal working conditions and in an emergency situation.
- Know the capacity of gathering spaces before scheduling meetings or other events.
- Practice physical distancing at all meetings and, where possible, use teleconference and video conference facilities.
- Consider work-from-home options for back office staff where practicable.
- Where a roster system is in place attempt to limit interactions between different groups of staff members. Stagger break times to reduce the number of staff using break room at one time.
- Vary operating hours to limit number of people in the workplace.
- Vary tasks to reduce the number of people required in indoor areas.
- Hold meetings outside where appropriate (still following physical distancing).
- Separate tables/seating to ensure physical distancing.
- Where travel is required, the number of passengers in a vehicle should be minimised.
- Special arrangements should be put in place where workers share accommodation.
- Ask for remote quoting and cost estimating to limit the amount of face to face interaction.
- Consider cashless transactions to reduce the transfer of money from one person to another.
- Where you can’t achieve this physical distancing, identify appropriate alternative controls. These may include:
  - minimising the number of people within any area at any one time
  - limiting access to the workplace or parts of the workplace to essential workers only
  - moving different tasks to different areas of the workplace, or off-site if possible
  - personal protective equipment (PPE) may also be appropriate in some circumstances.
Title | Standard | Actions to control the risks associated with COVID-19 may include, but not limited to:
--- | --- | ---
5. Providing instruction, training and supervision in respect to COVID-19 | The employer must provide each worker at the workplace (including contractors and volunteers) with information, training and instruction on:  
• the risks in relation to COVID-19, and  
• the control measures implemented in the workplace to mitigate those risks, in relation to COVID-19.  
The employer must provide adequate supervision to ensure that the control measures are implemented in the workplace in relation to COVID-19.  
The employer must also ensure that information and instruction is provided to other persons entering the workplace about the control measures in place to mitigate the risks of COVID-19 and the requirements of those persons to apply the control measures.  
The information and instructions are to be in a format that is reasonable to the circumstances.  
A worker or other person, at the workplace or entering or leaving the workplace, must comply, so far as the person is reasonably able, with any reasonable instruction that is given by the employer to allow the employer to manage the risks to health and safety within the workplace. | ▶ Ensure everyone is aware of their responsibility to protect themselves, other workers, and the public  
▶ Provide workers with written advice on how to manage COVID-19 risks  
▶ Display signs around the workplace advising of risk control requirements. For example, covering coughs, maximum number of people in a room, not to enter workplace if unwell  
▶ Provide workers with training in COVID-19 controls (conduct training using physical distancing)  
▶ Brief workers on the symptoms of COVID-19. Tell workers to stay home if they aren’t feeling well; even if they consider their symptoms minor  
▶ If workers need personal protective equipment (PPE), train workers to use it correctly  
▶ Ensure workers know what to do if someone at the workplace becomes infected with COVID-19  
▶ Give supervisors guidelines for ensuring COVID-19 controls are applied/enforced at all times  
▶ Document/record COVID-19 procedures; provide training to workers in these  
▶ Keep notes of issues raised and discuss at staff meetings or toolbox talks  
▶ Customers/clients/visitors at an employer’s premises must comply with any reasonable direction given to them about COVID-19 controls  
▶ Employers must advise customers/clients/visitors of these requirements using signs at the entrances of their premises, and if appropriate and available, through regular voice-over messages in the premises  
▶ Training and encouraging staff to take regular breaks to exercise adequate cleaning practices throughout the day  
▶ Identify vulnerable employees/staff and make alternative arrangements to support them to continue working without direct contact from others  
▶ Keep good records of COVID-19 related training and instruction provided to employees.
### 6. Responding to an incident of COVID-19 in the workplace

<table>
<thead>
<tr>
<th>Title</th>
<th>Standard</th>
<th>Actions to control the risks associated with COVID-19 may include, but not limited to:</th>
</tr>
</thead>
</table>
|       | The employer at a workplace must ensure that an emergency plan is prepared for the workplace that provides for emergency procedures, testing of the procedures and the provision of information, training and instruction to relevant workers in implementing the emergency procedures. | An emergency plan is a document that sets out instructions for workers and others in the case of an emergency. A COVID-19 emergency response plan should detail:  
- How the business will respond in the event of contamination by a worker or customer  
- Who has responsibilities in this event.  
Immediately notify Public Health by phoning 1800 671 738 and follow their advice to:  
- Help the affected person receive medical treatment  
- Identify who has been in close contact with the ill person  
- Isolate the affected areas: keep staff and customers away. You may need to close the business until advised it is safe to reopen.  
Organise cleaning of the area as directed by Public Health. For cleaning:  
- Review the Safe Work Australia guidance on cleaning and disinfecting workplaces  
- Wear PPE: face mask, protective eyewear and gloves  
- Remove soiled or contaminated items and dispose of them in a safe way  
- Clean and disinfect all surfaces or items that may have been in contact with the ill person.  
In some cases, you must notify WorkSafe Tasmania. Check the [WorkSafe Tasmania website](https://www.worksafe.tas.gov.au) for requirements.  
You may need to include in your plan:  
- Contact details for people who have specific roles or responsibilities under the emergency plan. For example, managers, security, cleaners, or first aid officers  
- Contact details for COVID-19 notification to Public Health  
- A description of the method to alert people to an emergency or possible emergency – this may be affected by remote working  
- Any changes to evacuation procedures or assembly points  
- The post-incident follow-up process, including who must be notified. (This may include the process for notifying the business if a worker experiences an emergency while working from home.)  
- If you share facilities, include a process for advising other businesses about a diagnosis of COVID-19  
- Procedures for testing the emergency plan, including the frequency of testing must be included  
- Arrange training to ensure all staff are aware of, and understand the plan. |
